

Join us on **the 4tech mission**

4tech has an overall vision – to create world leading technology that brings all information from inside a tank to your eye.

## The 4tech Vision

It started a cold, unpleasant winter in the early nineties. The founder of the company, P. M. Brun, was still a student, earning his money in a part time job at a petrol station. Being the youngest person in the staff, he was responsible for dipping the tanks.

*The founder Per Morten Brun, still 110% dedicated to research and development, adding value to your business.*

The idea was born one evening this winter, as P. M. Brun was struggling to enter the dipstick into the tanks.

Since then, 4tech ASA has been developing and manufacturing high class tank gauging solutions, based on innovative employees using leading edge technology. Today, the system gives all the people involved in wet stock management the information they need with the ease of a mouse click.

As a result of continuous innovation and development, 4tech ASA has won several awards and tenders.

We will continue our joyful, determined and important work to fulfil our common goals in close cooperation with customers throughout the world.

The heart of all downstream operations within an oil company, is the tanks. In order to achieve safe and efficient downstream activities, surveillance equipment is crucial important.

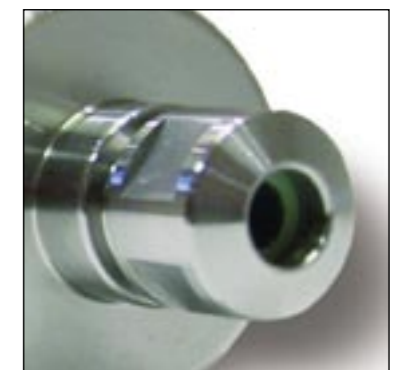

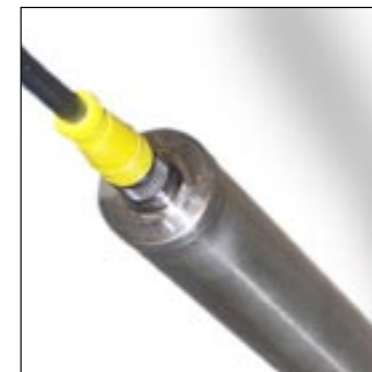

## Efficient and safe down stream operations

4tech ASA provides a complete range of such equipment for B2B customers, B2C customers, lubricant customers, and petrol stations.

Our sophisticated sensors are built into strong enclosures to ensure continuous real time measurements in all environments.

Collecting data from inside the tank is just the beginning of the information chain. Through our smart and user friendly systems, we provide all the information needed, to a PC, mobile phone or dedicated systems. The system solutions provide remote internet polling and readability.

For complete wet stock control, distribution planning and optimised flexibility, 4tech ASA offers the complete solution integrated in the oil companies ERP-solutions.

**FuelCom® 5080** is the most advanced control unit for the general tank monitoring market. It is built with the newest components and a totally restructured firmware to support present and future challenges. Speed, capacity, communication and M2M interface.

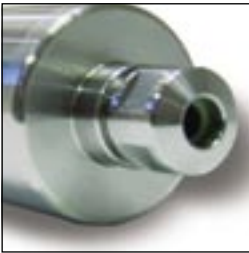

**FuelWin®** is the best software tool for wet stock monitoring and reconciliation. The system is fully Windows compatible and has been developed in close cooperation with users around the world for a decade. Version 4.0 launched autumn 2004!

**MiniCom®** is primarily designed to help the oil companies plan and organize their wet stock operations more efficient. Extended value is given by an unique, open architecture that opens opportunities to interface accessories like electricity metres, water metres, various alarms etc.

**FuelBar® 410** is the optimal submersible sensor for liquid storage tanks. The sensor construction includes several patented features and provides a dual separate signal loop for temperature and level measurement in addition to water detection.

**The DensiBar®** sensor is especially designed for continuous operations in rough environments. Through continuous density measurements, the customers achieves the most precise level measurement and the highest performing leak detection possible.

**MiniBar® - MT30** is a high performance level transducer, designed to perform continuous and precise level measurements. Typical applications are all kind of liquid process media. A capacitive ceramic sensing element ensures accurate and reliable measurements.

4tech ASA is a Scandinavian company, specialised in electronic tank gauging and wet stock management. The company is one of the worlds fastest growing gauging manufacturers and are today a leading supplier of high quality gauging components and complete turnkey solutions.

## - a leading supplier of tank gauging solutions

4tech guarantees a high performance gauging solution for any purpose, with unique installation flexibility, low maintenance and the most modern communication facilities available.

All gauging solutions from 4tech ASA are internet enabled. Tank gauging and extended communication over the internet ensures efficient logistics and a high level of safety, service and flexibility.

For complete control, optimised flexibility, and extended information handling, 4tech ASA offers the complete solution for integration with the oil companies ERP-solutions.
