

MiniCom – a high volume product designed for customers through energy/oil companies

MiniCom is a high quality system, designed for surveillance of a wide range of applications within the B2B, B2C and the industrial market.

MiniCom is primarily designed to help the oil companies plan and organize their wet stock operations more efficient. On top of this, a unique, open architecture opens possibilities to interface accessories like electricity-metres, water metres, alarms etc.

Typical use is customers of heating oil, lubricants, diesel and LPG.

All operations are supported by SMS. Used together with Site Vision all information are accessible over the internet, and integration with ERP systems like SAP is possible for full automation of Your routines!
